

E. D. Calefet

CRUISE REPORT

Cruise Number: MF9506

FOCI Number: 6MF95

NOAA Ship: Miller Freeman

Area of Operations: Eastern Bering Sea

Itinerary: Departed Dutch Harbor 16 April

Arrived Dutch Harbor 1 May

Participating Organizations: Alaska Fisheries Science Center (AFSC/NOAA),
Pacific Marine Environmental Lab. (PMEL/NOAA)
University of Alaska

Chief Scientist : Sigrid Salo, PMEL/NOAA

Personnel:

Lisa Britt, AFSC

Audra Janiak, University of Alaska

Leslie Lawrence, PMEL

Lynn Long, PMEL

Nazila Merati, AFSC

Bill Rugen, AFSC

Sigrid Salo, PMEL

Objectives of Cruise:

The objectives of cruise MF9506 were:

To perform a bongo survey of the southeast Bering Sea slope and shelf, along with feeding/predator experiments in larval patches in each of the two regions. The regions are delineated in the figures at the end of this report.

To examine currents and transport of organisms through Unimak Pass with a CTD and bongo survey.

To calibrate moorings 95BSM1-3 with MOCNESS and bongo tows and CTD's, and to examine spatial scales of flow between moorings 95BSM2 and 95BSM3 with a CTD section between them.

Summary of Operations:

On this cruise, we occupied 150 stations. Most were bongo stations, but we also did 52 CTD casts and 5 MOCNESS tows.

A Cruise Sampling Summary is appended to this report as Table 1.

Operations:

The cruise track is shown in Figure 1, and operations at all stations are listed in Table 2. Stations started with a 60cm bongo tow, including a rough count from net 2. FOCI investigators requested other operations at specific sites, or when larval concentrations were high. These included CTD's, 20cm bongos, Tucker trawls, MOCNESS tows, live tows, and CalVet tows, and a special set of nets for the 60cm bongos to determine if yolk-sac larvae were passing through the 333 mesh nets. Unfortunately, we found very few larvae, so this experiment was halted roughly halfway through the cruise. We also collected larvae for genetic studies.

We started work at the outer slope stations and worked toward the east. Larval concentrations were very low except at a few sites on line BS (figure 2), so to save time, we interrupted line BJ to return to BS for the larval patch study before completing the slope survey.

After completing the slope grid, we occupied the Unimak Pass stations, starting at the western station in the pass itself and working anticlockwise. This is the only part of the cruise which included an intensive CTD survey to examine currents and transport.

Next, we went to the two stations inside the Unimak box, deploying ARGOS buoy 7211 between them, and continued on to mooring 95BSM1 on the shelf.

Our course on the shelf became rather tortuous, which will cause us problems with data analysis. We started at the two southern rows of stations, because the northern stations were still covered by ice. We lost a day to a storm as we headed back west on rows 7-10. By the time we had reached the northern stations, the ice had receded, so we completed the northern end of the shelf grid.

Both of the moorings in this area had been dragged by the ice, and neither was transmitting data or positions. We therefore modified our course to arrive at their sites in daylight hours. We were unable to identify a certain position for mooring 95BSM3, the northwestern mooring, but did locate and recover mooring 95BSM2, which had lost its tower, meteorological instruments, and much of its surface float to the ice.

Some very preliminary results:

Rough counts of larval concentration (Figure 2) were low almost everywhere on the slope and shelf. Egg concentrations (figure 3) were higher; there was a large patch on the middle shelf.

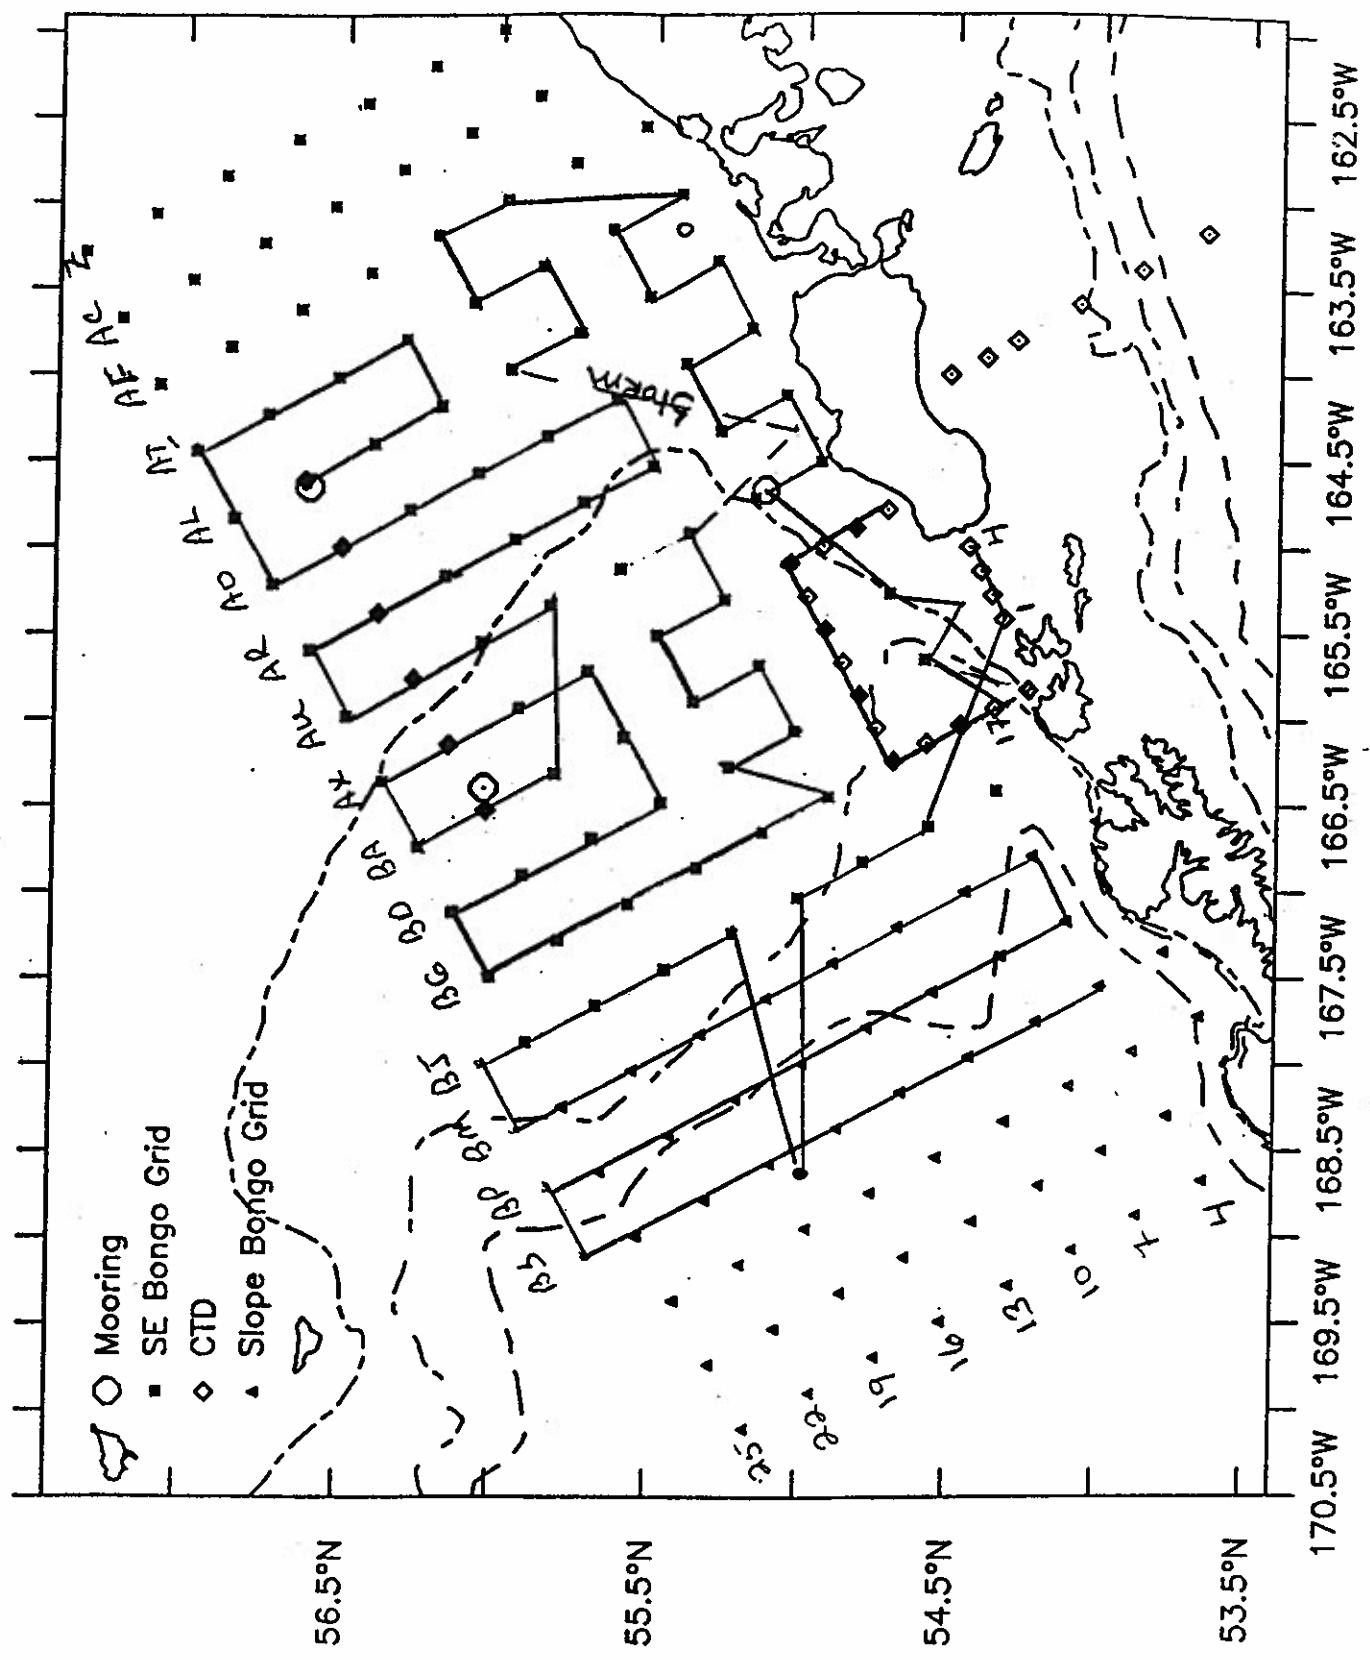

The temperature field reflects the recent presence of ice. Temperatures at 25m were less than 0 in the northeastern corner most recently covered by ice, and were less than 3 degrees almost everywhere except the outer slope: the area we did find larvae was the warmest area we surveyed. Bottom temperatures were warmer than near-surface temperatures, but they were also less than 3 degrees over much of the shelf.

Acknowledgements:

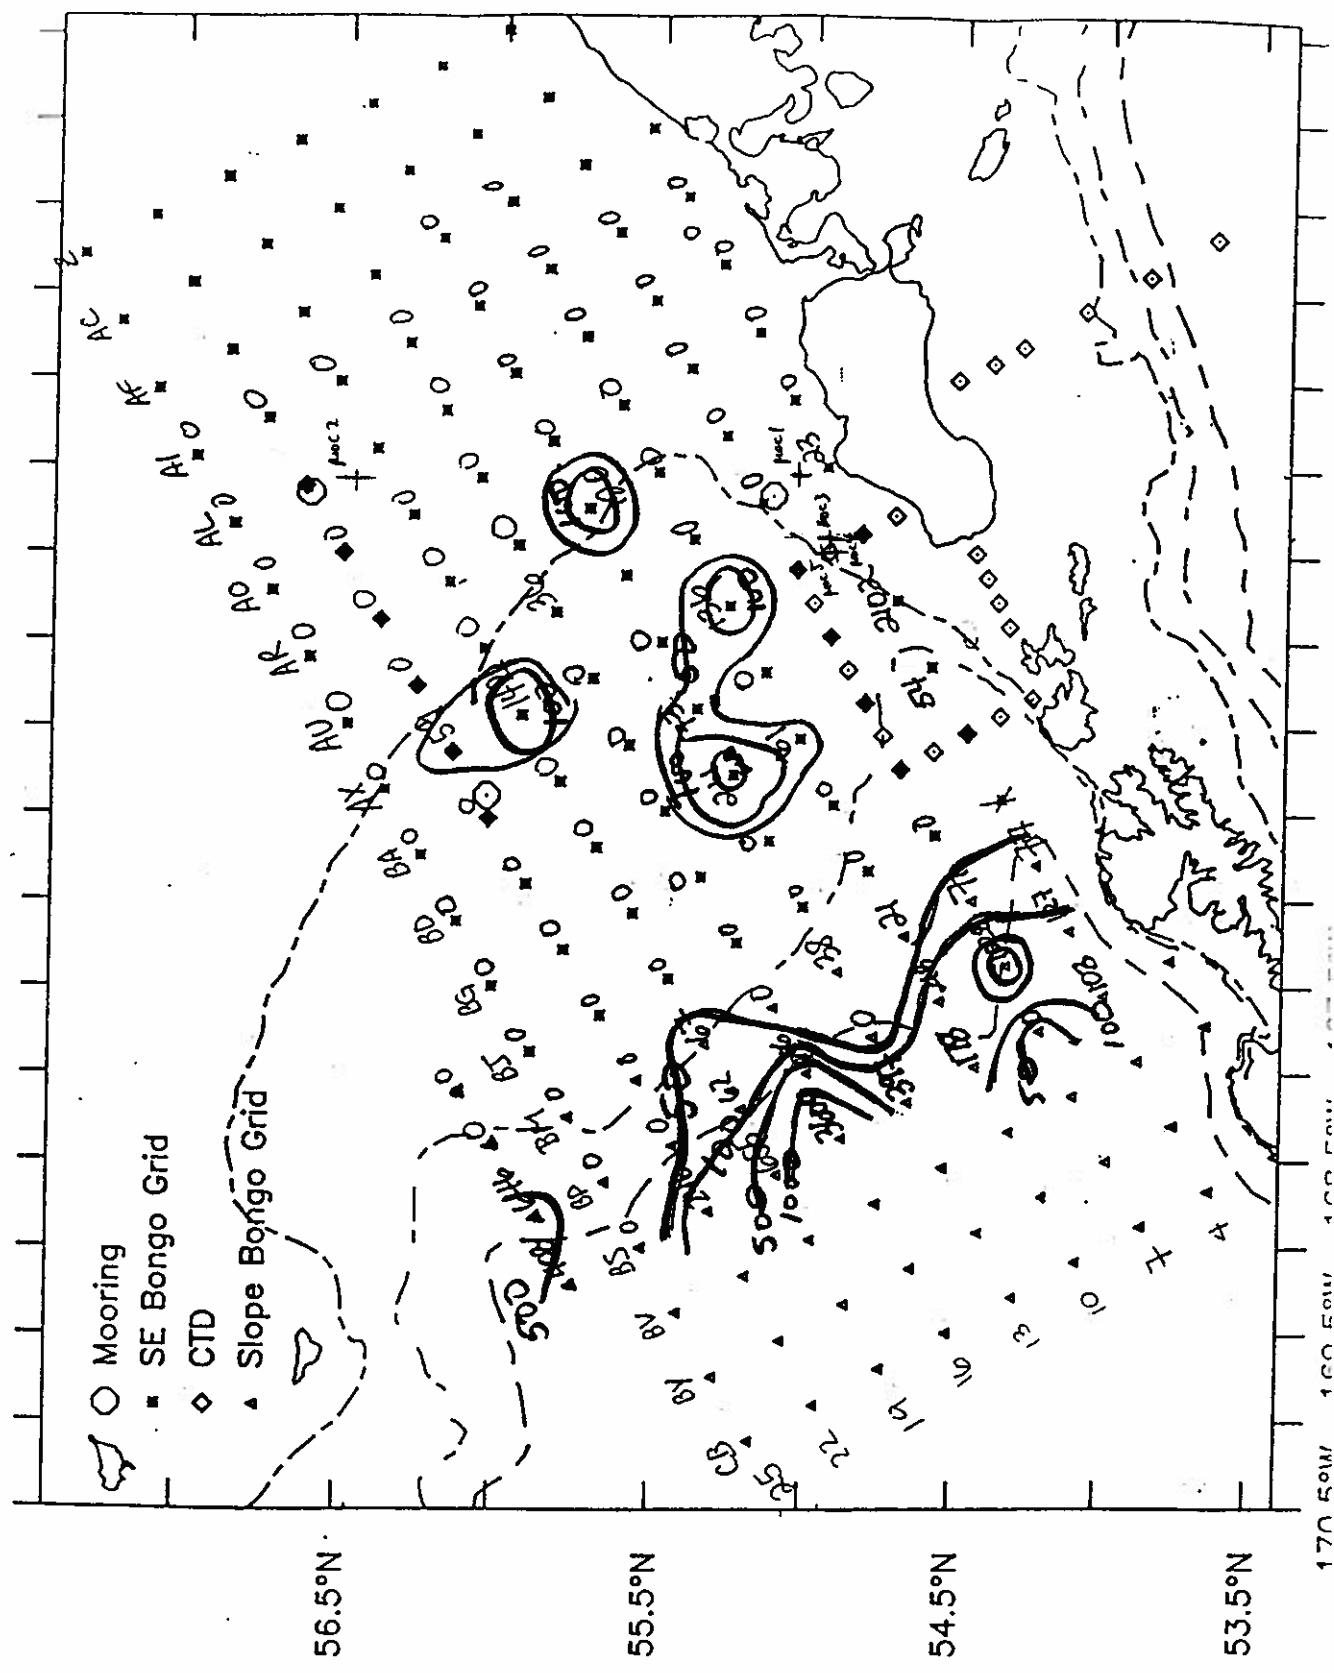

We'd like to acknowledge the competent help of the officers and crewmembers of the Miller Freeman. Without their knowledge of the ship, equipment, and area we would have accomplished none of our goals. We'd like to especially thank the people we worked with most closely: the survey and deck departments, and Rick Philips the ET, who were especially helpful. And we thank Bruce Thomassen for having such sharp eyes!

Recommendations:

The new SCS system is still being developed, and we expect problems both with the system and with learning to use it. One feature of the system which causes me problems is that the bongo seacat records are treated the same as the thermo-salinograph records. To find data from a bongo, it's necessary to search through a long file of bongo data separated by "garbage", one line a second, when the seacat was not on. This year, we discovered that the new program to read seacat_obs.scs files and output ascii files does not appear to write data into an output file, so we had to use the old routine to look at seacat data.

Cruise Sampling Summary where Performance = Good or Quest

Number of casts where absorption samples collected: 31
Number of absorption samples: 66
Number of dedicated ADCP transects: 1
Number of dedicated ADCP transect endings: 1
Number of tows where adults were taken for genetic samples: 0
Number of adults taken for genetic samples: -00-
Number of tows where adult stomachs were collected: 0
Number of stomachs taken from adult fish: -00-
Number of tows where adult fish were measured for length/frequency analysis: 0
Number of adult fish measured for length/frequency analysis: -00-
Number of tows where adult fish otoliths were collected: 0
Number of adult fish from which otoliths were collected: -00-
Number of tows where adult fish weights were collected: 0
Number of adult fish from which weights were collected: -00-
Number of weather balloons released: 0
Number of BKG-calibration casts: 0
Number of tows where blood samples were collected from adult pollock: 0
Number of pollock from which blood samples were collected: -00-
Number of CAT files saved: 133
Number of ChLAM casts: 44
Number of chlorophyll casts: 42
Number of chlorophyll samples: 167
Number of CTD casts (with & without bottles): 52
Number of discards: 107
Number of EBKG depth files saved: 0
Number of dedicated EK500 transect beginnings: 0
Number of dedicated EK500 transect endings: 0
Number of fluorescence casts: 50
Number of Furuno depth files saved: 0
Number of tows where juvenile pollock were taken for genetic samples: 0
Number of juvenile pollock taken for genetic samples: -00-
Number of tows where juvenile pollock stomachs were taken: 0
Number of stomachs taken from juvenile pollock: -00-
Number of tows where juvenile pollock were measured for length/frequency analysis: 0
Number of juvenile pollock measured for length/frequency analysis: -00-

Cruise Sampling Summary where Performance = Good or Quest

Number of casts where phytoplankton preserved in formalin: 15
Number of formalin preserved phytoplankton samples: 15
Number of Particulate Organic Carbon casts: 0
Number of Particulate Organic Carbon samples: -00-
Number of hauls were predators were collected: 10
Number of predators collected: 324
Number of nets preserved as QTOWF: 285
Number of sample jars used for formalin preservation: 286
Number of nets preserved as QTOWS: 0
Number of sample jars used for Stockard's preservation: -00-
Number of mooring deployments: 0
Number of mooring recoveries: 1
Number of satellite tracked buoy deployments: 1
Number of ScanMar depth files saved: 0
Number of hauls where SedTrap was deployed: -00-
Number of hauls where SedTrap was recovered: 0
Number of RADAR tracked buoy deployments: 2
Number of RADAR tracked buoy recoveries: 2
Number of hauls where larval pollock were collected
for shrinkage studies: 0
Number of larval pollock measured for shrinkage studies: -00-
Number of dedicated SSF transect beginnings: 0
Number of dedicated SSF transect endings: 0
Number of dedicated TSG transect beginnings: 0
Number of dedicated TSG transect endings: 0
Number of VideoCTD recordings saved: 0
Number of VideoNet recordings saved: 0
Number of Xbt casts: 0
Number of hauls where 20Bon was used: 28
Number of hauls where 60Bon was used: 137
Number of tows where Anchovy trawl was used: 0
Number of casts where bottles were used w/o CTD: 0
Number of hauls where CalVET was used: 5
Number of tows where Diamond trawl was used: 0
Number of tows where 83-112 bottom trawl was used: 0
Number of tows where IKMT was used: 0
Number of tows where IKS was used: 0
Number of hauls where 10" Clarke-Bumpus was used: 9
Number of hauls where 60Bon with taped codends was used: 15
Number of tows where Marinovich trawl was used: 0

Cruise Sampling Summary where Performance = Good or Quest

Number of tows where Methot was used: 0
Number of hauls where MOC1 was used: 5
Number of hauls where MOC2 was used: 0
Number of hauls where Neuston was used: 0
Number of tows where Nor'easterly bottom trawl was used: 0
Number of hauls where .75m ring net was used: 1
Number of hauls where 1 m ring net was used: 0
Number of tows where rope trawl was used: 0
Number of tows where shrimp trawl was used: 0
Number of tows where Tucker epibenthic sled was used: 0
Number of hauls where 4 7/8" Clarke-Bumpus was used: 0
Number of tows where Tuck1 was used: 22
Number of tows where Tuck3 was used: 0

Table 2

The columns in this table are: Station number, haul number, FOCI grid name, alternate station name(ie, CTD cast#, MOCNESS#), instrument or equipment used, date, time, latitude, and longitude.

Each instrument has its own line in the table; a tow that used two instruments such as a 60cm bongo and the Seacat will have two lines in the table.

Equipment listed is:

60bon: 60cm bongo, 333 mesh nets. Tows to 200m or 10 off bottom, unless a station also lists a 20cm bongo for the tow. In that case, tows are to 400m or 10 off bottom.

20bon: 20cm bongo, 135 mesh nets.

CalVet: CalVet nets to 60m.

CAT: Seacat pressure/temperature/salinity sensor

CTDB: Seabird CTD cast. Casts were generally to 100m or ten off bottom, except in the Unimak Pass box where all casts went to 10 off bottom.

Live: 60cm bongo, taped codends, tows to 70m

Tuck1: Tucker. First net 100m-60m. Second net 60m-surface at first patch. Nets at 70-30 and 30-surface in second patch.
